Motivated Computer Science (AIML) undergraduate with foundational programming skills and hands-on experience in IoT hardware (Arduino/ESP32) alongside AI-assisted software and 3D modeling workflows.

Summary

- B.Tech CSE (AIML) undergraduate at SIET Panchkula with foundational programming skills and practical exposure to embedded systems (Arduino/ESP32).
- Hands-on experience developing functional prototypes—including IoT automation systems, published mobile apps, and local software utilities—using prompt-driven and AI-assisted workflows.
- Fast learner with strong analytical, collaboration, and troubleshooting skills, eager to apply foundational software and hardware concepts to practical challenges.

Core Competency

Programming Languages	C, C++, Python, C# (.NET) (Foundational), JavaScript (Foundational), SQL
Web & Mobile Development	.NET MAUI, XAML, HTML5, CSS3
Databases & Storage	SQL Server, SQLite
AI & Emerging Tech	Prompt Engineering, Generative AI (Image/Video Synthesis), Basic Machine Learning
Developer Tools & Platforms	Google Antigravity , Google AI Studio ,Visual Studio, VS Code, Blender 3D, Git/GitHub
IoT & Hardware	Arduino, ESP 32 ,PCB fabrication, and 3D design/printing.

Certification

- Internship completed from Altruist Technologies Private Limited
- Completed SQL Bootcamp from Lets Upgrade
- Completed Introduction to Generative AI from Learn Skillible
- Completed Front End Web Development by Edunet Foundation
- Completed Retrieval Augmented Generation with LangChain by IBM Skills Build
- Unlocked Gold level during the Go for Gold contest in iAspire by Accenture
- Completed Journey to Cloud: Envisioning Your Solution by IBM Skills Build
- Completed Getting Started with Artificial Intelligence by IBM Skills Build

Projects Undertaken:

ZONEBREAKER (Under development)	
Role	Solo Game Designer & Developer
Platform	**PC & Mobile (Browser-based)**
Technology	Google AI Studio, React, TypeScript, HTML5 Canvas/WebGL, AI-Assisted Workflows
Responsibility	Designed and developed a 2.5D low-poly sci-fi arena shooter featuring a character gacha system, dynamic combat mechanics, and a multi-currency cosmetic economy.
Feature	➢ Engineered core 2.5D arena gameplay including player movement, weapon firing, dodge mechanics, and destructible enemy boxes with varying HP and attack patterns. ➢ Designed and implemented a complete character collection system (R, SR, SSR rarities) with distinct stat balancing, unique active/passive skills, and duplicate conversion mechanics. ➢ Built a gacha recruitment system with a pity/guarantee system (10-pull, 25-pull, 150-pull guarantees) and multi-tiered banner rewards. ➢ Developed a deep economic system with three currencies (Coins, Gems, Tickets), implementing specific sinks and faucets for weapon skins, cosmetic items, and player progression. ➢ Programmed a full UI/UX flow including a 3D character inspection viewer, a cosmetic inventory (bullet trails, box skins, arena themes), and a player profile/achievement system. ➢ Utilized Google AI Studio to rapidly prototype, generate voxel-inspired 3D assets, and architect scalable game managers (Combat, Recruitment, Economy, UI).

Sugar Tracker App(Publishing phase)	
Role	Mobile App Developer
Platform	**Mobile Application – Google play**
Technology	.NET MAUI, C#, XAML, SQLite, Android SDK, Native Canvas API, Antigravity
Responsibility	Designed and developed a Sugar Tracker mobile application using Antigravity to help users record blood sugar levels, analyse readings, and monitor trends over time.
Feature	➢ Developed a mobile app to record and manage blood sugar readings. ➢ Implemented trend visualization to track changes in blood sugar levels over time. ➢ Added analysis features to help users understand their readings and identify patterns. ➢ Designed a simple, intuitive, and user-friendly interface for easy navigation.

Privacy-First Code & Text Cryptography Auditor	
Role	Security & Software Engineer
Platform	**Desktop Application (GUI & CLI) (Local / On-Premise)**

Technology	Python, ONNX Runtime, Hugging Face, PySide6, Google DeepMind Antigravity
Responsibility	Architected an air-gapped security and compliance auditing tool using Google DeepMind Antigravity to perform 100% local, zero-data-egress scanning and automated sanitization of source code and documents.
Feature	➢ Built an air-gapped auditor for local, zero-data-egress scanning and sanitization across code and documents. ➢ Engineered a hybrid detection pipeline pairing fast regex with ONNX-quantized Transformer models for PII masking and text rewriting. ➢ Cut false positives by over 85% using Shannon entropy filtering, Luhn checksums, and AST-level entity denylists. ➢ Created an automated risk-scoring engine generating real-time audit reports in Markdown, CSV, and JSON formats. ➢ Delivered dual operational workflows: an interactive PySide6 desktop interface and a headless CI/CD-ready CLI.

My Portfolio	
Role	Front-End Developer
Platform	**HTML, CSS, JavaScript**
Responsibility	Designing and developing a personal portfolio website to showcase resume and projects.
Feature	➢ Created a personal portfolio website to highlight skills, education, and projects. ➢ Designed and developed the UI using HTML, CSS, and JavaScript. ➢ Practiced clean and responsive design principles. ➢ Portfolio link: https://pranjal2565.github.io/pranjalPortfolio.github.io/

Automatic / Time Based Smart Gas Stove Project	
Role	IoT Developer / Embedded Systems Student
Platform	**Arduino, Sensors, Embedded C/C++**
Responsibility	Designing, programming, and integrating hardware for gas monitoring and automatic shut-off.
Feature	➢ Developed an IoT-based system to automate gas shut-off using Arduino. ➢ Integrated sensors and microcontrollers to monitor gas flow and timer conditions. ➢ Gained practical experience with hardware components, circuit design, and embedded programming.

Enterprise HRMS Portal	
Role	Full-Stack Developer
Platform	**Local Web Application (Localhost)**
Technology	React, TypeScript, Tailwind CSS, Python (FastAPI), Microsoft SQL Server, PyODBC, TanStack Query, Google Antigravity
Responsibility	Spearheaded the end-to-end design and development of an Enterprise HRMS portal using Google Antigravity, running locally to automate

	core workforce workflows, ticketing, and role-based data management.
Feature	➢ Built an enterprise portal using Google Antigravity for agent-assisted schema mapping, API scaffolding, and testing. ➢ Implemented JWT-based RBAC across Admin, HR, and Employee tiers for granular endpoint security. ➢ Automated core HR workflows including UTC-synced attendance tracking, leave management, and company announcements. ➢ Developed a split-pane helpdesk ticketing system with dynamic status state machines and issue tracking. ➢ Optimized SQL Server queries and integrated TanStack Query client caching for low-latency data rendering.

Academic Qualification

Board / University	**School / Institute**	**Subject**	**Marks**	**Year of passing**
AISSE, CBSE	HOLY CHILD SCHOOL, MORNI ROAD, PANCHKULA, HARYANA	English, Information Technology, Science, Maths, Social Science, Hindi	94.2%	June, 2021
AISSCE, CBSE	GOVT. MODEL SANSKRITI SR. SEC. SCHOOL, SECTOR-20, PANCHKULA	English Core, Physical Education, Chemistry, Maths, Physics	82%	May ,2023
B.Tech. CSE Artificial Intelligence and Machine Learning		Semester 1	7.57 SGPA	June, 2024
		Semester 2	8.08 SGPA	November, 2024
		Semester 3	7.42 SGPA	September ,2025
		Semester 4	6.52 SGPA	February ,2026
		Semester 5	7.38 SGPA	April , 2026
		Semester 6	7.57 SGPA	September ,2026
		Semester 7	Pursuing	--
